Přehled produktových řad

EX Série

Na trhu existuje spousta aktivních reprosoustav, avšak v KV2 je aktivní reprosoustava mnohem více než jen zesilovač třídy D připevněný na zadní straně reproboxu. Zkušenosti, které byly využity při vývoji této řady, vycházejí z práce našeho zakladatele Jiřího Krampera na legendární sérii ART, která proslavila RCF.

ESD Série

Když jsme se v KV2 rozhodli vyvinout řadu pasivních reproduktorů, využili jsme při jejich konstrukci všech našich znalostí a vybavili je řadou revolučních prvků jako zpožďovací linkou nebo aktivní kontrolou impedance. Výsledkem je řada ESD, pravděpodobně nejkvalitnějších pasivních reproduktorů vhodných pro velmi širokou škálu použití.

CS Série

Řada CS je navržena jako dvoupásmové pasivní řešení pro aplikace, kde velmi záleží na subtilní a nerušivé estetice, jako jsou malé a velké firemní akce a prezentace s velmi vysokou kvalitou zvuku, se zaměřením na mluvené slovo. Umožňuje mimořádně flexibilní jednoduchou instalaci včetně kompatibility s všemi běžně používanými systémy zavěšení.

ESM Série

ESM série vznikla z dlouholetých požadavků na pasivní příposlechové monitory, které by měly stejný charakter zvuku a vlastnosti jako aktivní reprosoustavy KV2. Díky použití unikátní analogové zpožďovací linky se povedlo vyrobit pasivní reprosoustavy s dokonale vyrovnanou kmitočtovou ale hlavně fázovou charakteristikou.

ESP zesilovače

Zesilovače ESP jsou určeny pro poskytování nejvyšší možné amplifikace. Jsou vybaveny speciálně navrženými obvody a topologií s nejnižší úrovní zkreslení a časem ustálení. Jsou navrženy pro pohon a řízení pasivních reproduktorů ze série ESD. Tato série se vyrábí ve dvou (ESP2000) a čtyřkanálových (ESP1000, ESP4000) modelech, využívajících ručně navíjené toroidální transformátory, unikátně navržené obvody, zesilovač a ochranu reproduktorů.

ES Série

ES série byla vůbec první výrobkem vyvinutým v KV2 a za poslední dekádu si vydobyla celosvětové renomé a oblibu za svůj výkon, kompaktnost a akustické vlastnosti. Jednoduše nastavitelný, logisticky nenáročný systém s veškerou elektronikou a amplifikací v odděleném přenosném modulu - EPACK2500 a 2500R. Umístěním aktivních elektronických prvků do odděleného modulu umožňuje snadnou obsluhu a instalaci. EPACK2500/R obsahuje čtyři specificky určené zesilovače. Elektronická výhybka, časové a kmitočtové vyrovnání, ekvalizace a ovládací prvky využívají digitální konverzi signálu na úrovni 20 MHz.

ESR Série

ESR série byla navržena pro prostory kde je zapotřebí celopásmová reprosoustava se širokým vyzařováním a vysokou kvalitou zvuku. Systém je vhodný tam, kde je zapotřebí celopásmový systém s velmi vysokým rozlišením a širokým pokrytím. Jednoduchost použití a efektivita ESR systému je dána díky použití pouze jednoho stereo zesilovače, který zahrnuje veškerou ekvalizaci a řízení.

SL Série

SL série s reproboxy SL412 a SL2.15 má velmi stylový a diskrétní design. Jsou vyvinuty k jednoduché montáži na vnější stěnu, podpěry, na stohování nebo pro jednoduché zavěšování, hodí se však i pro zvucení střední velkých živých vystoupení. Mohou být dodávány v barevném provedení podle požadavků zákazníka. Montáž s jedním třmenem s vícenásobnými možnostmi nastavení úhlu a druhu připevnění, nabízí rychlé a levné řešení montáže.

VHD Série

Systém VHD staví na filozofii bodového zdroje vyzařování. Díky tomu nabízí drasticky redukované zkreslení, obrovsky zvětšený dynamický rozsah a staví nás před novou úroveň zvukové reprodukce dříve neslyšené u velkých zvukových systémů. Serie VHD redukuje množství prvků potřebných pro zvukové pokrytí daného prostoru. Tím odstraňuje problémy s interferencí, které vytvářejí násobné zdroje zvuku v moderních line array uspořádáních. Vyrovnání a fázová korekce je provedena pomocí 20MHz digitálních zpožďovacích linek.

K-RIG

K-RIG byl vyvinut s cílem následovat směr vytyčený před více než 13 lety ES sérií, která se celosvětově prosadila jako spolehlivý, kompaktní a velmi výkonný PA systém. K-RIG míří na méně náročné aplikace, menší až střední produkce, dj's do cca 1000 posluchačů. Je maximálně jednoduchý na instalaci, obsluhu, dopravu a je cenově dostupnější v porovnání cena x výkon.

JK - DI Boxy

Kromě mnoha dalších jedinečných a užitečných funkcí, jsou všechny DI-boxy vybaveny budiči linek (Line Drivery) zajišťující plnou kvalitu zvuku i při připojení dlouhých kabelů (např. multipárových).

Procesory

V souladu s naším zaměřením na co nejvyšší kvalitu zvuku, vyrábíme také řadu audio procesorů, které se začleňují do našich, nebo jiných systémů proto aby poskytly co nejlepší kvalitu signálu od zdroje k reproduktorům.

500 Série

Výjimečné analogové audio nástroje, které přinášejí inovativní práci Jiřího Krampery a jeho vývojového týmu do modulárního formátu 500 Series – obvody třídy A, jedno z nejnižších zkreslení ve své kategorii a zcela nový přístup k dlouhodobě známým problémům zpracování zvuku.
